

Tommy Chin's Talk

Title: From Concepts to Practicality: The Impacts of Neglecting Security Practices

Description:

Today's world often reinforces the concepts of cyber hygiene and security awareness through methods such as instructional PowerPoint slides, posters, and email. A concern of the existing security awareness efforts is that they lack an explanation of the consequences for not following these rules and recommendations. This presentation provides an overview of some of the impacts of neglecting security practices and demonstrates a series of offensive security (hacking) tools.

Bio:

Tommy Chin is a Security Researcher at GRIMM and focuses his background in networking, machine learning, moving target defenses, and target tracking. He holds several awards, certifications, and degrees. Tommy serves as a publication reviewer for several publishers such as IEEE, Elsevier, and John Wiley & Sons.
