

Need to Know-<u>Trenching &</u> <u>Excavations</u>

TRENCHING & EXCAVATIONS

PHOTO SOLICE: WWW OSHA GOV

PA OSHA CONSULTATION

Remember....

Locate underground utilities before breaking ground

The "competent person" must choose and implement a protective system Even excavations less than 5-feet deep also need to be deemed safe by the competent person

Never enter an unprotected trench that is 5-feet or more in depth Structures become unstable when earth next to them is removed, ensure they are supported

Soil piles should be kept 2 feet back (minimum)

Cave-ins can happen without warning Also be sure to consider:

- o Nearby mobile equipment
- o Hazardous atmospheres
- Potential for water accumulation
- Safe Access

Work defensively

Follow you company's excavation and trenching safety rules

Correct the hazards you are able to correct and report to your supervisor the hazards you are unable to correct
